2167

DATE MAILED: 06/28/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/749,985

Applicant(s)

SHAKIB ET AL.

Examiner

Susan F. Rayyan

Art Unit

2167

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 December 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 04212004.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

1. Claims 1-29 are pending.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on April 21, 2004 was filed before First Action. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 19-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

MPEP 2106 IV.B.2. (b) A claim that requires one or more acts to be performed defines a process. However, not all processes are statutory under 35 U.S.C. 101. Schrader, 22 F.3d at 296, 30 USPQ2d at 1460. To be statutory, a claimed computer-related process must either: (A) result in a physical transformation outside the computer for which a practical application. is either disclosed in the specification or would have been known to a skilled artisan, or (B) be limited to a practical application.

Claims 19-21 in view of the above cited MPEP sections, are not statutory because they merely recite a data structure stored in memory. The claimed said data structure a first data field comprising reference information associated with page data and a second data field comprising a page steps do not provide concrete or tangible results and/or being limited to a practical application.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-29 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent Application Publication Number 2002/0129014 issued to Brian S. Kim (“Kim”).

As per claim 1 Kim anticipates a page index system (see paragraph 22) comprising:
a page data store that stores reference information associated with pages (paragraph 25 and Figure 1:Reference Number 24);
a crawler component that receives a page, retrieves reference information associated with the page from the page data store, and provides the page and associated reference information (paragraph 23, lines 1-3 and paragraph 25).

Kim teaches a page data store that stores reference information associated with pages, a crawler component that receives a page, retrieves reference information associated with the page from the page data store, and provides the page and associated reference information (paragraphs 23, 25).

As per claim 2, same as claim arguments above and Kim anticipates:
a web crawler employing the system of claim 1(paragraphs 23,25).

As per claim 3, same as claim arguments above and Kim anticipates:
the reference information comprising anchor text (paragraph 25, lines 5-7).

As per claim 4, same as claim arguments above and Kim anticipates:
the reference information comprising at least one of a sentence fragment, a sentence
and a paragraph in proximity to a referencing uniform resource locator (paragraph 25,
lines (paragraph 25, lines 2-5).

As per claim 5, same as claim arguments above and Kim anticipates:
an Internet search engine employing the page and associated reference information
provided by the system of claim 1 (paragraphs 23, 25).

As per claim 6, same as claim arguments above and Kim anticipates:
the page data store storing a uniform resource locator identifying a page, the uniform
resource locator further being employed to store the reference information associated
with a particular page (paragraph25, lines 2-5).

As per claim 7, same as claim arguments above and Kim anticipates:
one or more readable media having stored thereon computer executable instructions for carrying out the system of claim 1 (paragraph 23,25).

As per claim 8 Kim anticipates a crawler (see paragraph 22) comprising.
an input component that receives a page (paragraph 23, lines 2-3);
a parser component that parses the page for another page referenced on the page, stores reference information associated with the another page in a page data store (paragraph 25, lines 7-12 and Figure 1);
a retrieval component that receives the page and retrieves reference information associated with the page from the page data store (paragraph 28-29);
an output component that provides an output comprising the page merged with the reference information associated with the page (paragraph 29).

Kim teaches an input component that receives a page, a parser component that parses the page for another page referenced on the page, stores reference information associated with the another page in a page data store, a retrieval component that receives the page and retrieves reference information associated with the page from the page data store, an output component that provides an output comprising the page merged with the reference information associated with the page (paragraphs 23,25,28-29).

Art Unit: 2167

As per claim 9, same as claim arguments above and Kim anticipates:

a page indexing system comprising the crawler of claim 8 (paragraphs 23,25,28-29).

As per claim 10, same as claim arguments above and Kim anticipates:

further comprising the page data store (paragraph 25 and Figure 1: Reference Number 24).

As per claim 11, same as claim arguments above and Kim anticipates:

the page data store storing reference information associated with pages (paragraph25, lines 2-5).

As per claim 12, same as claim arguments above and Kim anticipates:

the page data store storing a uniform resource locator identifying a page, the uniform resource locator further being employed to store the reference information associated with a particular page(paragraph25, lines 2-5).

As per claim 13, same as claim arguments above and Kim anticipates:

the reference information comprising anchor text(paragraph 25, lines 5-7).

As per claim 14, same as claim arguments above and Kim anticipates:

the reference information comprising at least one of a sentence fragment, a sentence and a paragraph in proximity to a referencing uniform resource locator (paragraph 25, lines 2-5).

Art Unit: 2167

As per claim 15 Kim anticipates a method facilitating page indexing (paragraph 22) comprising:

retrieving reference information associated with a page(paragraph 25)

providing an output comprising the page merged with the reference information associated with the page (paragraph 29).

As per claim 16, same as claim arguments above and Kim anticipates:

at least one of the following:

receiving a request to retrieve the page, retrieving the page, storing reference information associated with a uniform resource locator on a page (paragraph 25, Figure 1: Reference Number 24).

As per claim 17, same as claim arguments above and Kim anticipates:

retrieval of the reference information associated with the page being based, at least in part, upon a uniform resource locator identifying the page (paragraph 25, lines 2-5).

As per claim 18, same as claim arguments above and Kim anticipates:

one or more computer readable media having stored thereon computer executable instructions for carrying out the method of claim 15 (paragraphs 22,25,29).

Art Unit: 2167

As per claim 19 Kim anticipates a memory for storing data for access by an application program being executed on a page indexing system, comprising:

a data structure stored in said memory, said data structure a first data field comprising reference information associated with a page and a second data field comprising the page (paragraphs 25,30).

Kim teaches a data structure stored in said memory, said data structure a first data field comprising reference information associated with a page and a second data field comprising the page(paragraphs 25,30).

As per claim 20, same as claim arguments above and Kim anticipates:
the reference information comprising anchor text(paragraph 25, lines 5-7).

As per claim 21, same as claim arguments above and Kim anticipates:
reference information further comprising at least one of a sentence fragment, a sentence and a paragraph in proximity to a referencing uniform resource locator(paragraph 25, lines 2-5).

As per claim 22 Kim anticipates one or more computer readable media storing computer executable components of a crawler (see paragraph22) comprising:
an input component that receives a page(paragraph 23, lines 2-3);
a parser component that parses the page for another page referenced on the page,

stores reference information associated with the another page in a page data store(paragraph 25, lines 7-12 and Figure 1);
a retrieval component that receives the page and retrieves reference information associated with the page from the page data store(paragraph 28-29);
an output component that provides an output comprising the page merged with the reference information associated with the page(paragraph 29).

Kim teaches an input component that receives a page, a parser component that parses the page for another page referenced on the page, stores reference information associated with the another page in a page data store, a retrieval component that receives the page and retrieves reference information associated with the page from the page data store and an output component that provides an output comprising the page merged with the reference information associated with the page (paragraphs 23,25 28-29).

As per claim 23, same as claim arguments above and Kim anticipates:
the page data store storing a uniform resource locator identifying a page, the uniform resource locator further being employed to store the reference information associated with a particular page(paragraph25, lines 2-5).

As per claim 24, same as claim arguments above and Kim anticipates:
reference information comprising anchor text. (paragraph 25, lines 5-7).

As per claim 25, same as claim arguments above and Kim anticipates:

reference information comprising at least one of a sentence fragment, a sentence and a paragraph in proximity to a referencing uniform resource locator (paragraph 25, lines 2-5).

As per claim 26 Kim anticipates:

means for storing reference information associated with pages (paragraph 25);

means for receiving a page (paragraph 29);

means for retrieving reference information associated with the page from means for storing reference information (paragraph 25, 28-29);

means for providing an output, the output comprising the page merged with the reference information associated with the page (paragraph 29).

Kim teaches means for storing reference information associated with pages, and, means for receiving a page, means for retrieving reference information associated with the page from means for storing reference information and means for providing an output, the output comprising the page merged with the reference information associated with the page (paragraphs 25,28-29).

Art Unit: 2167

As per claim 27, same as claim arguments above and Kim anticipates:

he means for storing reference information storing a uniform resource locator identifying a page, the uniform resource locator further being employed to store the reference information associated with a particular page(paragraph25, lines 2-5).

As per claim 28, same as claim arguments above and Kim anticipates:

the reference information comprising anchor text(paragraph 25, lines 5-7).

As per claim 29, same as claim arguments above and Kim anticipates:

the reference information comprising at least one of a sentence fragment, a sentence and a paragraph in proximity to a referencing uniform resource locator(paragraph 25, lines 2-5).

Contact Information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Susan Rayyan whose telephone number is (571) 272-1675. The examiner can normally be reached M-F: 8am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cottingham can be reached on (571) 272-7079. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
